Many #rabies control programmes include some form of dog population management #DPM, usually sterilization. If it can be carried out on a large enough scale, sterilization can enhance rabies control efforts by contributing to a more stable population of longer lived (vaccinated) dogs.

Sterilization #DPM can enhance #rabies control efforts by contributing to a more stable population of longer lived (vaccinated) dogs.

Even after being exposed to a rabid animal, you can still prevent #rabies and save a human life. Seek medical treatment and receive rabies post-exposure prophylaxis immediately before the onset of symptoms to stay safe.

NEVER WAKE UP A SLEEPING DOG

Global Alliance for Rabies Control

Have fun and create friendships with your pet!

It's a great responsibility and privilege to have a pet. Your pet is a part of your family, just like a brother or sister. Become friends with your pet and speak to them! They can be your best friend, and are good at keeping secrets!

You must show respect towards all animals, just as you show respect for your brother, sister, parents and teachers.

If possible, find a dog training school that could teach your dog basic commands.

If you want a friend, be a friend!
