

# MAKING A CONTROL POLE FOR DOGS

1

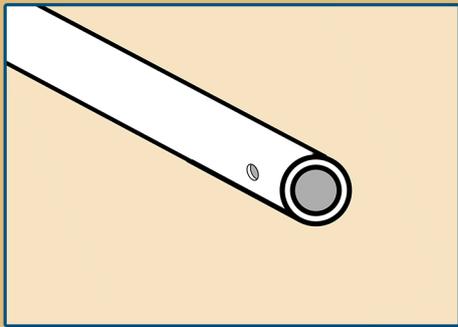

Cut a strong, rigid, non-porous pipe (e.g., PVC or metal) to the length of 150cm.

2

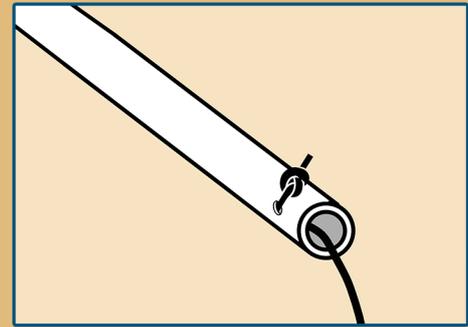

Cut a piece of strong rope to the length of 300cm (2x the length of the pipe).

3

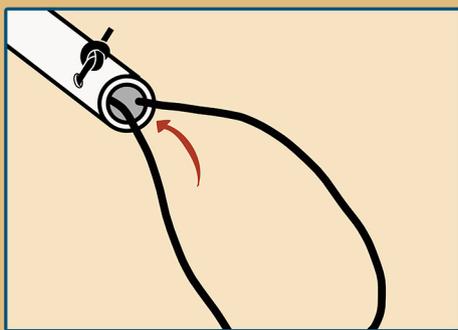

Drill a hole (just thick enough for the rope)  $\pm 10$ cm from the end of the pipe.

4

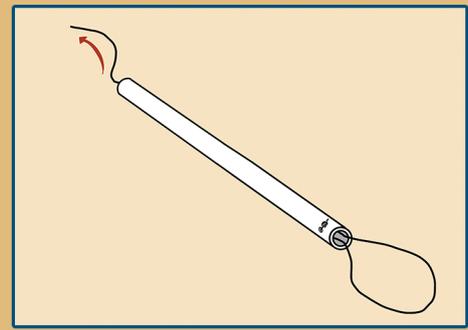

Thread the rope through the hole and tie a tight knot on the outside of the pipe.

5

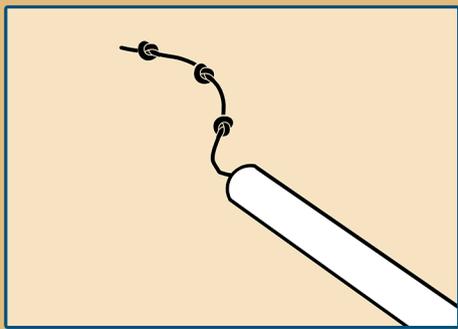

Thread the loose end of the rope through the pipe.

6

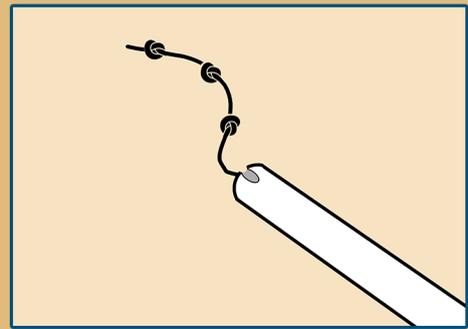

Pull the rope all the way through, but leave a loop at the end.

7

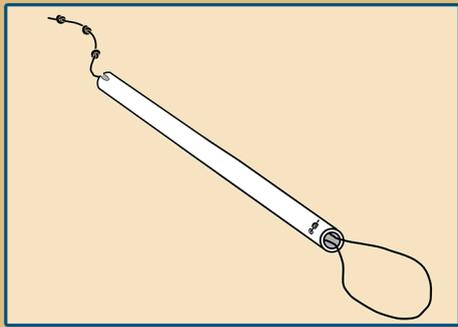

Tie several evenly-spaced knots into the end of the rope.

8

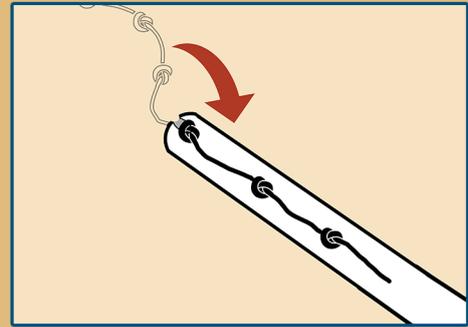

Cut a slot as wide as the rope (not the knots) in the pipe

9

The control pole is now ready for use.

10

Move the rope into the slot to lock it in place.
